

1. through 40. (CANCELLED)

41. (NEW) A bankruptcy practice credit manager internet system, which comprises:

- (a.) at least one manager processor computer, each of said at least one manager processor computer having a conventional microprocessor having a central processing unit with operating system hardware and software for conventional microprocessing, including sufficient hardware and software to operate on the Internet and having connection to operate on the Internet, said at least one manager processor computer being functionally connected to an internet system and having secured access to a bankruptcy practice program on a host server, said bankruptcy practice program includes a bankruptcy practice program home page that provides access to general case information and links to individual debtor and case information files, and includes access to plans of reorganization for bankrupt clients having plans of reorganization, including documents, links, and plan information, and includes access to bankruptcy court proceedings dates;
- (b.) a plurality of creditor processor computers, each of said creditor processor computers having a conventional micro-processor having a central processing unit with operating system hardware and software for conventional microprocessing, including sufficient hardware and software to operate on the internet and having connection to operate on the internet, said plurality of creditor process computers being functionally connector to said internet system and having access to said bankruptcy practice program on a host server;

- (c.) third party processor computers, which are provided read only access to said bankruptcy practice program via said at least one host server;
- (d.) an internet system, including at least one host server, said at least host server having said bankruptcy practice program with a homepage and with sufficient software to:

- (i) provide to said at least one manager processor computer access to said bankruptcy practice program, secured access to said program to set up individual bankrupt client case files, which are secured to prevent any other users from write functions with respect thereto, editing capabilities, and input and transmittal capabilities for notices;
- (ii) provide to said plurality of creditor processor computers access to said bankruptcy practice program, limited access to said program to provide informational access, claimant creditor information sheet inputs and valid voting capability for plans, and to deny said plurality of creditor processor computer access to secured manager processor computer write functions.
- (iii) provide at least three levels of security providing different levels of editing for each level of security, including a master level, an attorney level and bankruptcy client level.

42. (NEW) The bankruptcy practice credit manager internet system of claim 41, wherein said at least one manager processor computer and said plurality of creditor processor

computer include e-mail capabilities for communication with one another via said host server.

43. (NEW) The bankruptcy practice credit manager internet system of claim 41, wherein said plurality of third party processor computers includes e-mail capabilities, via said host server for communications with at least one of said at least one manager processor computers and said plurality of creditor processor computers.

44. (NEW) The bankruptcy practice credit manager internet system of claim 41 wherein said home page includes selection options for contacting said at least one manager processor computer.

45. (NEW) The bankruptcy practice credit manager internet system of claim 41, wherein said bankruptcy practice program provides access to claims motions.

46. (NEW) The bankruptcy practice credit manager internet system of claim 41, wherein said bankruptcy practice program includes access to recent case developments.

47. (NEW) The bankruptcy practice credit manager internet system of claim 41, wherein said bankruptcy practice program includes accessing individual bankrupt client files by claim number or case number identification.

48. (NEW) The bankruptcy practice credit manager internet system of claim 41 wherein there are at least four levels of security providing different levels of editing for each level of security, including a master level, an attorney level, a bankruptcy client level and a third party level.

49. (NEW) A bankruptcy practice credit manager internet system, which comprises:

- (a) at least one main manager processor computer having a conventional microprocessor having a central processing unit with operating system hardware and software for conventional microprocessing, including sufficient hardware and software to operate on the internet and having connection to operate on the internet, and being functionally connected to an internet system and having a level one top security access to a bankruptcy practice program with exclusive access to write and edit specified aspects of said bankruptcy practice program, said bankruptcy practice program includes a bankruptcy practice program home page that provides access to general case information and links to individual debtor and case information files, and includes access to plans of reorganization for bankrupt clients having plans of reorganization, including documents, links, and plan information, and includes access to bankruptcy court proceedings dates;
- (b) a plurality of sub-manager processor computers, each of said plurality of sub-manager processor computers having a conventional microprocessor having a central processing unit with operating system hardware and software for

conventional microprocessing, including sufficient hardware and software to operate on the internet and having connection to operate on the internet, said plurality of sub-manager processor computers being functionally connected to an internet system and having a level two secured access to said bankruptcy practice program with access to write and edit only counsel-related aspects of said bankruptcy practice program;

(c) a plurality of creditor processor computers, each of said creditor processor computers having a conventional micro-processor having a central processing unit with operating system hardware and software for conventional microprocessing, including sufficient hardware and software to operate on the internet and having connection to operate on the internet, said plurality of creditor process computers being functionally connected to said internet system and having a level two secured access to said bankruptcy practice program with access to write and edit only creditor-related aspects of said bankruptcy practice program;

(d) third party processor computers, which are provided read only access to said bankruptcy practice program via said at least one host server;

(e) an internet system, including at least one host server, said at least host server having a bankruptcy practice program with a homepage and with sufficient software to:

(i) provide to said at least one main manager processor computer access to said bankruptcy practice program, level one secured access to said

program to set up individual bankrupt client case files, which are secured to prevent any other users from write functions with respect thereto, editing capabilities and input, and transmittal capabilities for notices, hearings and dispositions

(ii) provide to said plurality of sub-manager processor computers access to said bankruptcy practice program, level two secured access to said program to set up individual bankrupt client case files, which are secured to prevent any other users from write functions with respect thereto, editing capabilities and input, and transmittal capabilities, and with exclusion to level one secured access;

(iii) provide to said plurality of creditor processor computers access to said bankruptcy practice program, level three access to said program to provide informational access, claimant creditor information sheet inputs and valid voting capability for plans, and with exclusion to level one and level two secured access;

(iv) provide at least three levels of security providing different levels of editing for each level of security, including a master level, an attorney level and bankruptcy client level.

50. (NEW) The bankruptcy practice credit manager internet system of claim 49, wherein said at least one manager processor computer and said plurality of creditor processor

computer include e-mail capabilities for communication with one another via said host server.

51. (NEW) The bankruptcy practice credit manager internet system of claim 49, wherein said at least one manager processor computer and said plurality of creditor processor computer include e-mail capabilities for communication with one another via said host server.

52. (NEW) The bankruptcy practice credit manager internet system of claim 49, wherein said home page includes selection options for contacting said at least one manager processor computer.

53. (NEW) The bankruptcy practice credit manager internet system of claim 49, wherein said bankruptcy practice program provides access to claims motions.

54. (NEW) The bankruptcy practice credit manager internet system of claim 49, wherein said bankruptcy practice program includes access to recent case developments.

55. (NEW) The bankruptcy practice credit manager internet system of claim 49, wherein said bankruptcy practice program includes accessing individual bankrupt client files by claim number or case number identification.

56. (NEW) The bankruptcy practice credit manager internet system of claim 40 wherein there are at least four levels of security providing different levels of editing for each level of security, including a master level, an attorney level, a bankruptcy client level and a third party level.
